COSC1519 Introduction To Programming
Practical 6
3 marks
It is your responsibility to show your answers to your instructors before the end of class.

In a new Eclipse project, implement the Account class and the TestAccount class as shown in the 6/Apr lecture (lecture recordings can be found under Canvas→Echo 360. Both classes must be in the same Eclipse project and in separate .java files.

Now modify the code so that instead of having Account objects stored in 'mum' and 'dad', they are stored in an array of the Account type.

You must complete the above during the first hour of the session and submit only your Account.java and TestAccount.java. via Canvas→Assignments→Practical 6. During the second hour, please go to your instructors and show your work and they will mark you. As there are many students and the class time is limited, you must ensure that your work is clear and ready to be examined. If you have questions after the demo, please ask via the discussion forums on Canvas or via consultation.
